Education:

Khulna University of Engineering & Technology, Khulna

Department Of Electronics & Communication Engineering
Year:3rd, Semester:1st

Skills:

- HTML
- CSS
- Bootstrap
- Tailwind
- JavaScript
- ReactJs
- Data Structure and Algorithm
- MongoDB
- ExpressJs

Projects:

1.learnZone

code || website

- the website fetches data from a json file.in this website I have used a fake data no database is connected then I have showed the data in home page using card
- In login/register system I have used firebase authentication.
- Password reset and email verification has been implemented

2.BookStore

servercode || clientcode || website

- For storing data I have used mongodb.
- CRUD operation has been implemented here.
- A user can see his/her selected items on MyItems section. He can't see what other users have selected.

3.ToolMania

servercode || clientcode ||website
admin: abc@gmail.com
password:12345678

- A full stack project. It has admin panel and user panel.
- An admin can make another user an admin. Add item delete item and many other things.
- Nested route has been used here. In dashboard section when a admin logs in will see certain options and when a user log in will see another options
